

Safe and secure into the future with a new generation of hybrid video surveillance

Recognising the increasing market challenges facing networked video surveillance in security, Siemens has introduced its next generation hybrid recording system: SISTORE MX 3G. This extends the already successful SISTORE MX hybrid video recording family, offering even more powerful functions. This system combines real-time 4CIF analogue and IP camera recording with up to 500 ips, offering many advanced features such as video analytics, pentaplex operation, various advanced search capabilities. With a comprehensive range of hybrid IP cameras and domes to support the new SISTORE MX 3G, this is an ideal hybrid system that can be used in a wide variety of security applications crossing over from analogue to digital. www.siemens.com/cctv
